Introduction

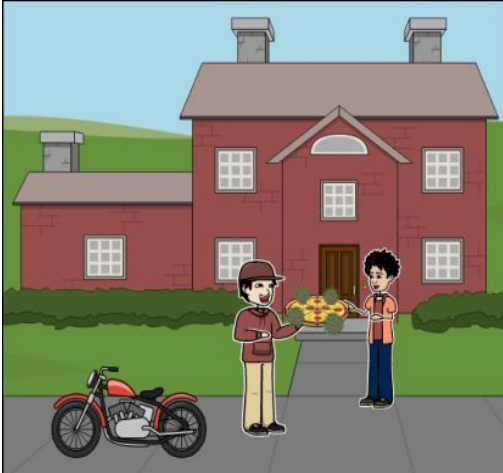

In the age of social distancing and quarantine restrictions, everyone is wary of ordering food online from FDA's (food delivery apps) like the good old days. These apps don't do enough to reassure customers that they're following restrictions in the kitchen. Swiggy, Zomato orders dropped 60% post April, Business Today reported.

Here comes our revolutionary, truly contactless device: **6ftDrone**

Armed with a sanitisation spray, the 6ft device removes the fear of delivery boys or someone in the restaurant spreading Covid-19 on the packaging itself. There will be no one handling your meal other than the hard working chefs who prepare it. All they have to do is hook the packaged meal onto the drone, which sanitizes the food packaging with the latest cutting edge technology.

6ftDrone then flies high above communal areas, avoiding the virus and heading to your destination with GPS technology. Finally, you receive a notification on your phone that your product has been delivered to your doorstep, virus free!

Storyboard

Todd picks up food from Amigos Pizza, which has been infected with Covid-19.

A day later, Todd feels breathlessness and fatigue, classic symptoms of the deadly virus.

Here we see 6ftDrone, socially distant and flying high above communal areas where the virus is spreading unrestrained.

6ftDrone sanitizing the food and picking it up for delivery

Todd picks up his Amigos Pizza, this time with no traces of the virus!
